A New Way to Connect Canadian Enterprises

Galaxy has a team of experts ready to address your connectivity concerns of Protection for People, Assets, Environment and Data, as well as enabling services for Business Communications and Morale Services, in a safer more sustainable connection.

OneWeb, powered by the newest low earth orbit (LEO) satellite communication network, brings a new way to connect in Canada. With national delivery and flexible bandwidth options, we have removed barriers to access internet in remote and rural areas.

Now, you'll be able to connect and access applications from anywhere:

- **Emergency responders**
- **Commercial Services**
- **Energy Sectors**
- **Mining**
- **Healthcare**
- **Education**
- **Government**
- **Utilities**

Platform & Network Features

Advanced Connectivity Management

- Flexible and scalable site connectivity options
- Guaranteed packet delivery and CIR
- Primary connection for un-served sites or as a backup solution to increase resilience for your site

LTE-like performance

- < 70 ms latency from Terminal to Galaxy's Point of Presences enabling support to real-time applications and cloud architectures
- Terminal download speeds up to 150 Mbps
- Always on, resilient and secure

Seamless coverage

- 100% complete global coverage

Multi-network solution

- Easy integration using Galaxy's SDWAN solution

Many customer applications

- Enterprise primary and back-up, cloud migrations, critical communications, community aggregation, and cellular backhaul
- Supports all cloud, video collaboration, voice and latency sensitive applications

Easy deployment

- Quick Canada wide deployment
- Flexible hardware installation
- Installation and implementation support from Galaxy at any site with the right solution

Innovative network technology

- Superior low earth orbit satellite comms
- Ground network in Canada
- Galaxy provided upstream including IP's and network Peering
- Supported by Galaxy's Canadian 24 x 7 Customer Care Center
